BINGO BOARD / OPTION B

Night Ops: a glass-cockpit fuel planner

A dark, instrument-panel direction for people who plan late, fly in VR, or keep the planner open on a second screen next to the sim. Fuel is read like a gauge, and warnings light up like caution lights.

Avionics colour rules

Cyan is data, green is fuel gained, amber is caution, red is warning, exactly as in a real cockpit.

Readable at a glance

B612, the typeface Airbus commissioned for cockpit screens, with big numerals for anything you'd scan for.

Instruments, not cards

A fuel tape, a totaliser gauge and an annunciator panel replace generic charts and lists.

Best for simmers who plan at night or in VR, want the planner to feel like part of the jet, and like strong, glanceable status.

Palette

Panel	#0D141D
Display text	#DCE6EE
Data cyan	#56D0E6
Fuel green	#62D58F
Caution amber	#F2B33D
Warning red	#FF5E52

Type

B612

Designed for cockpit displays. Clear 0/O and 1/l, built for glancing.

3,450 4,500

Screen 1 of 4

Fuel tape and cautions

The mission reads top to bottom like a checklist. Each leg is a bar of fuel remaining, with the burn hatched off the end, against fixed joker and bingo lines.

- Totaliser gauge gives the one number that matters: fuel at the trap.
- Annunciator tiles light amber or cyan when a check trips, dark when it passes.
- The row that crosses joker is highlighted, and the cause and fix sit right below the lights.

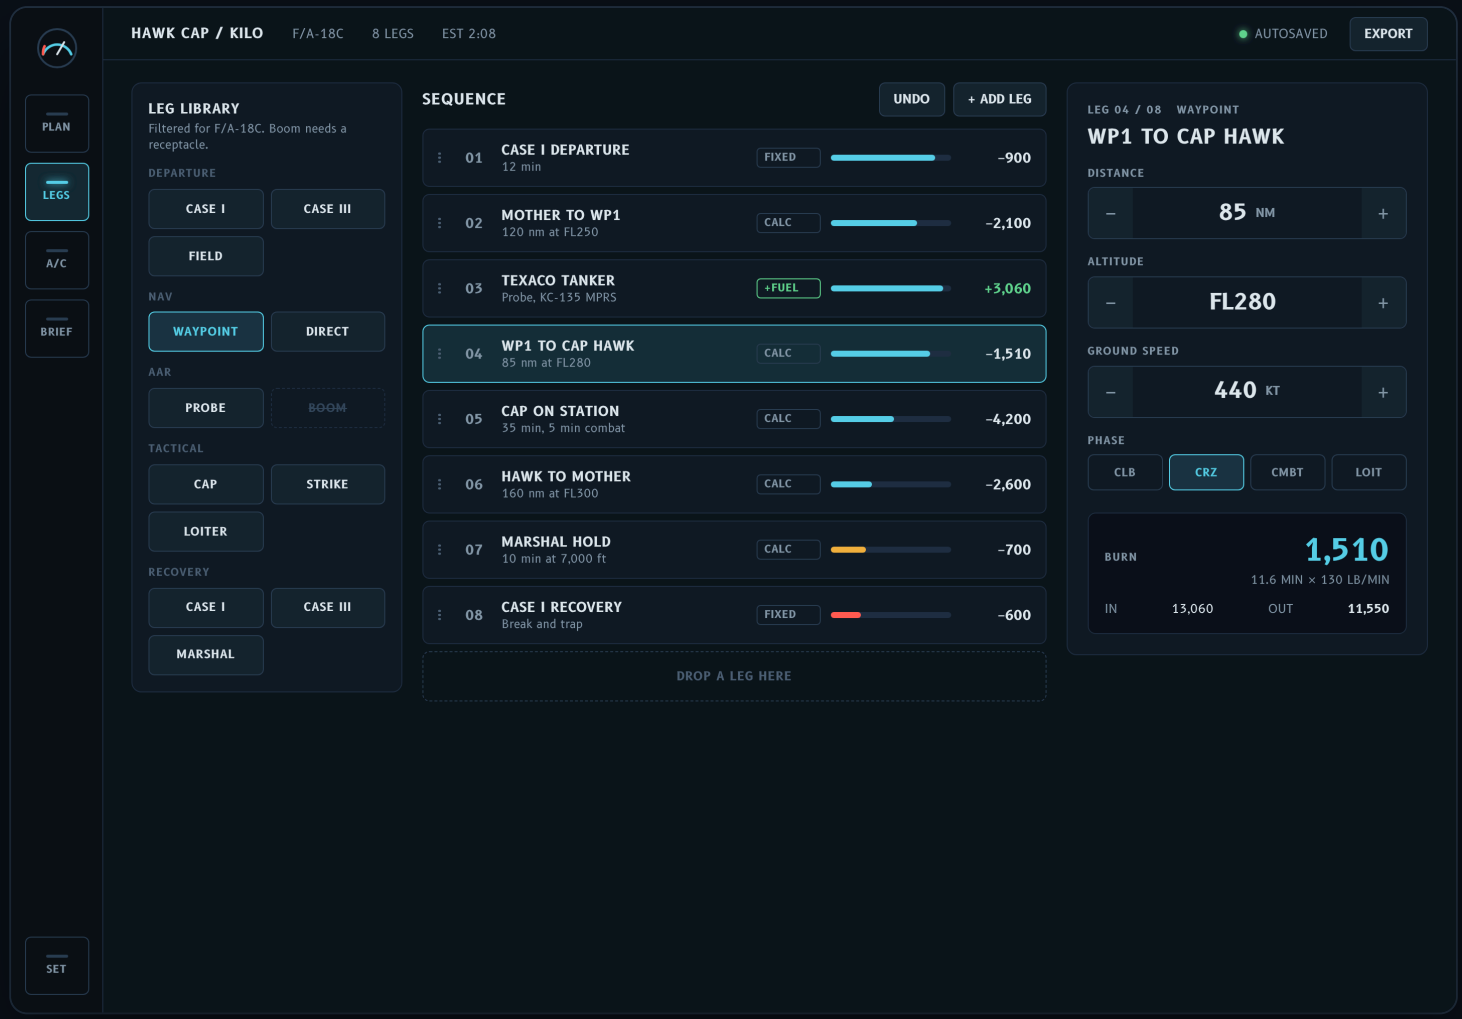

Screen 2 of 4

Leg builder

Library as a grid of push-buttons, sequence with inline fuel bars, and an editor built from big steppers that work well with a mouse or in VR.

- Boom refuelling is struck through, not hidden, so you know why it's missing.
- Steppers suit quick tweaks: nudge distance, watch the burn update.
- Burn readout shows the working: minutes × flow rate.

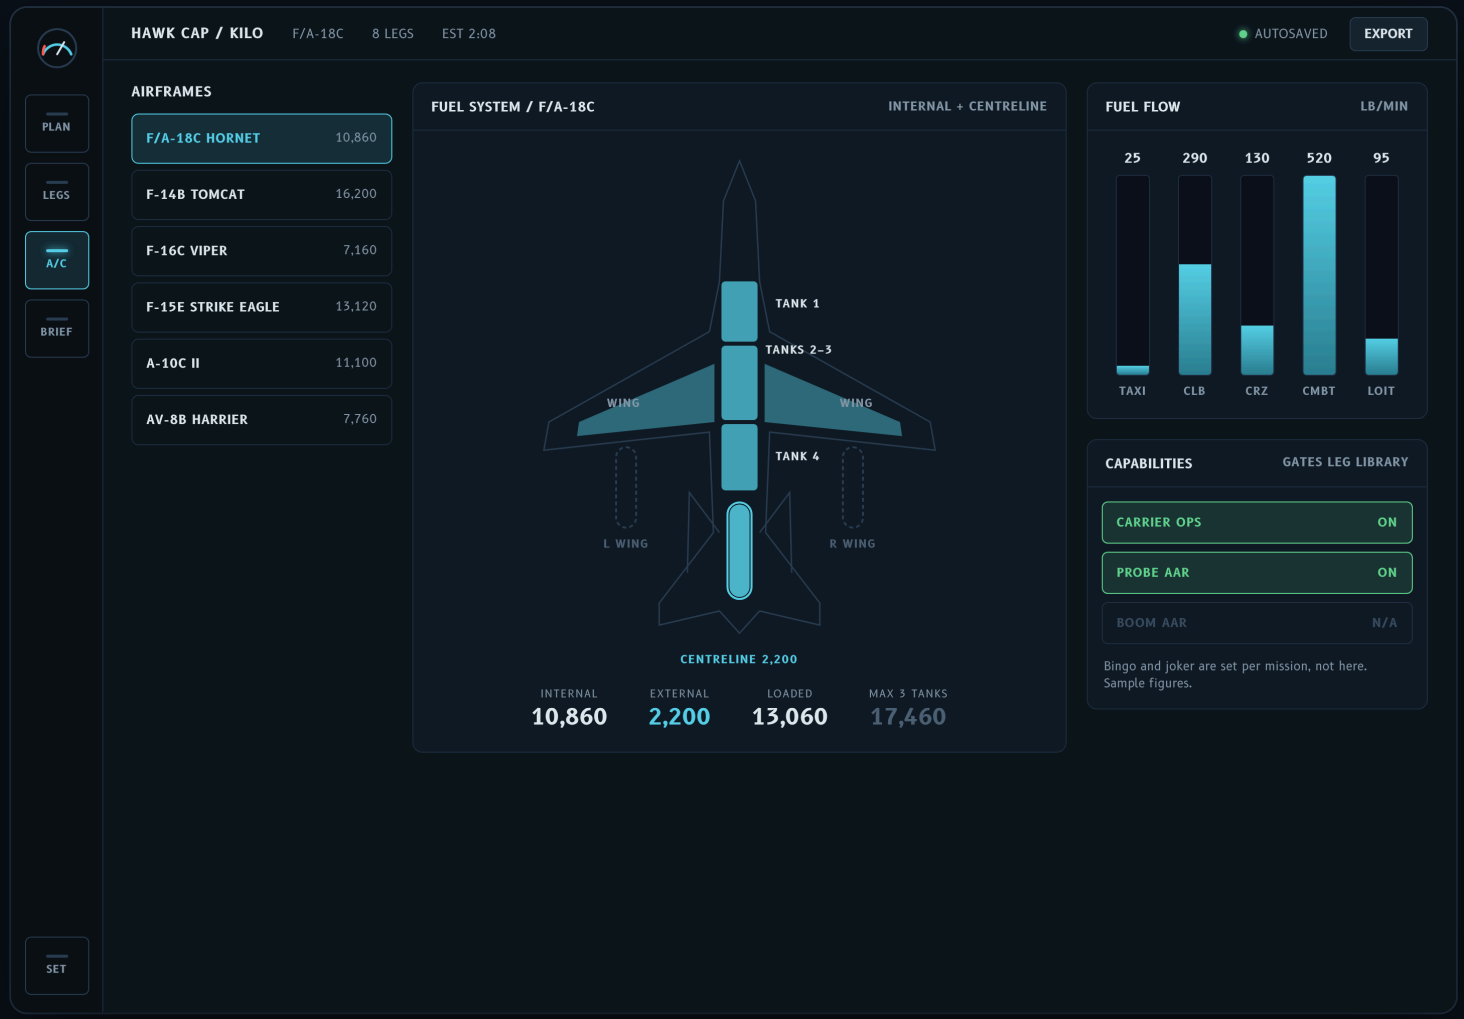

Screen 3 of 4

Fuel system page

The airframe profile is drawn like the jet's own fuel page: tanks on a top-down outline, with the fitted drop tank filled and empty stations dashed.

- Fuel flow by phase as vertical gauges, easy to compare.
- Capabilities show as ON / N/A switches that gate the leg library.
- Totals for internal, external, loaded and maximum along the bottom.

Screen 4 of 4

Kneeboard export

Kneeboard card in day and night (red-lit) versions, with an export straight into the DCS kneeboard folder.

- PNG export lands in the cockpit kneeboard without leaving the sim.
- Same JSON share and local history as the other options.
- Night card keeps contrast low enough not to wreck night vision in VR.
