BINGO BOARD / OPTION C

Chart Room: planning on the map table

A paper-and-ink direction borrowed from aeronautical charts, nav logs and ATC flight strips. The mission is shown where it happens, on a route map, with fuel written at every point.

Route first

A map with fuel callouts at each waypoint, so you can see where the fuel goes, not just how much.

Real planning forms

The nav log, flight progress strips and a data card use formats pilots already know.

Chart colour

Magenta for the route, blue for the tanker track, amber and red only for joker and bingo.

Best for mission makers and squadron briefers who think in routes and waypoints, and want printouts that look like proper planning paperwork.

Palette

Chart paper	#EEF1E8
Ink	#1E2A30
Route magenta	#9B2B6C
Tanker blue	#2B5E8C
Joker amber	#B3700A
Bingo red	#B03027

Type

Barlow Condensed

with Barlow for body text

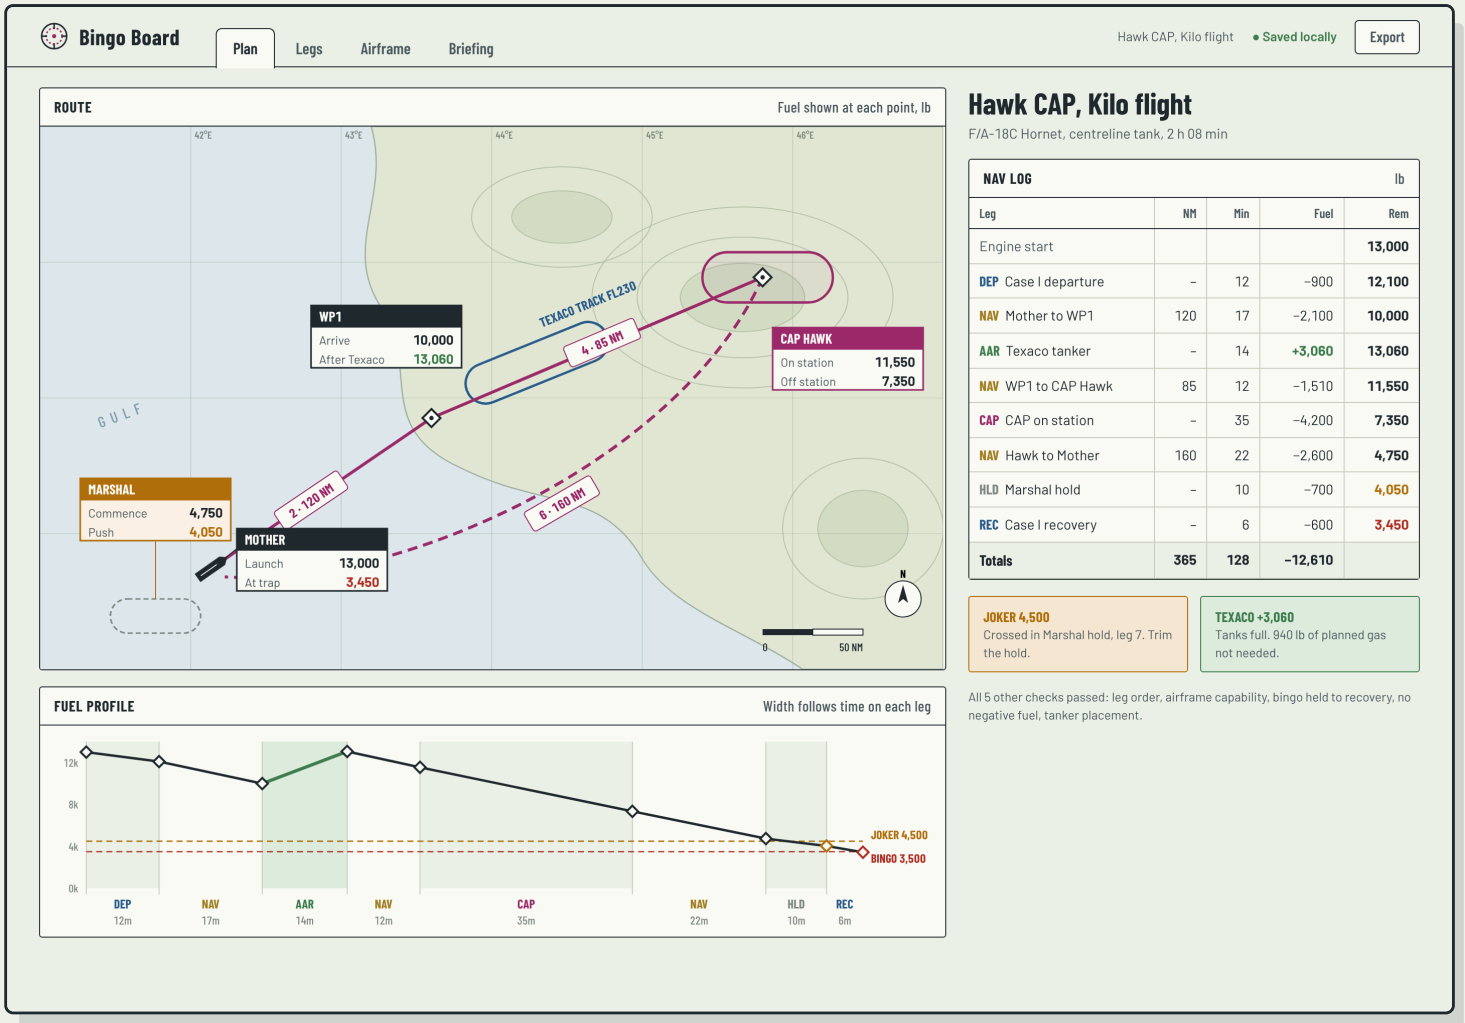

Condensed labels like chart lettering, so dense logs still fit.

Screen 1 of 4

Route and nav log

The route map leads, with chart-style boxes showing fuel at launch, WP1, the CAP and Marshal. A time-scaled fuel profile sits underneath like an approach plate.

- Profile widths follow minutes, so long legs like the CAP look long.
- Nav log on the right totals distance, time and fuel the way a paper log does.
- Tanker track and CAP orbit drawn as racetracks, in their own colours.

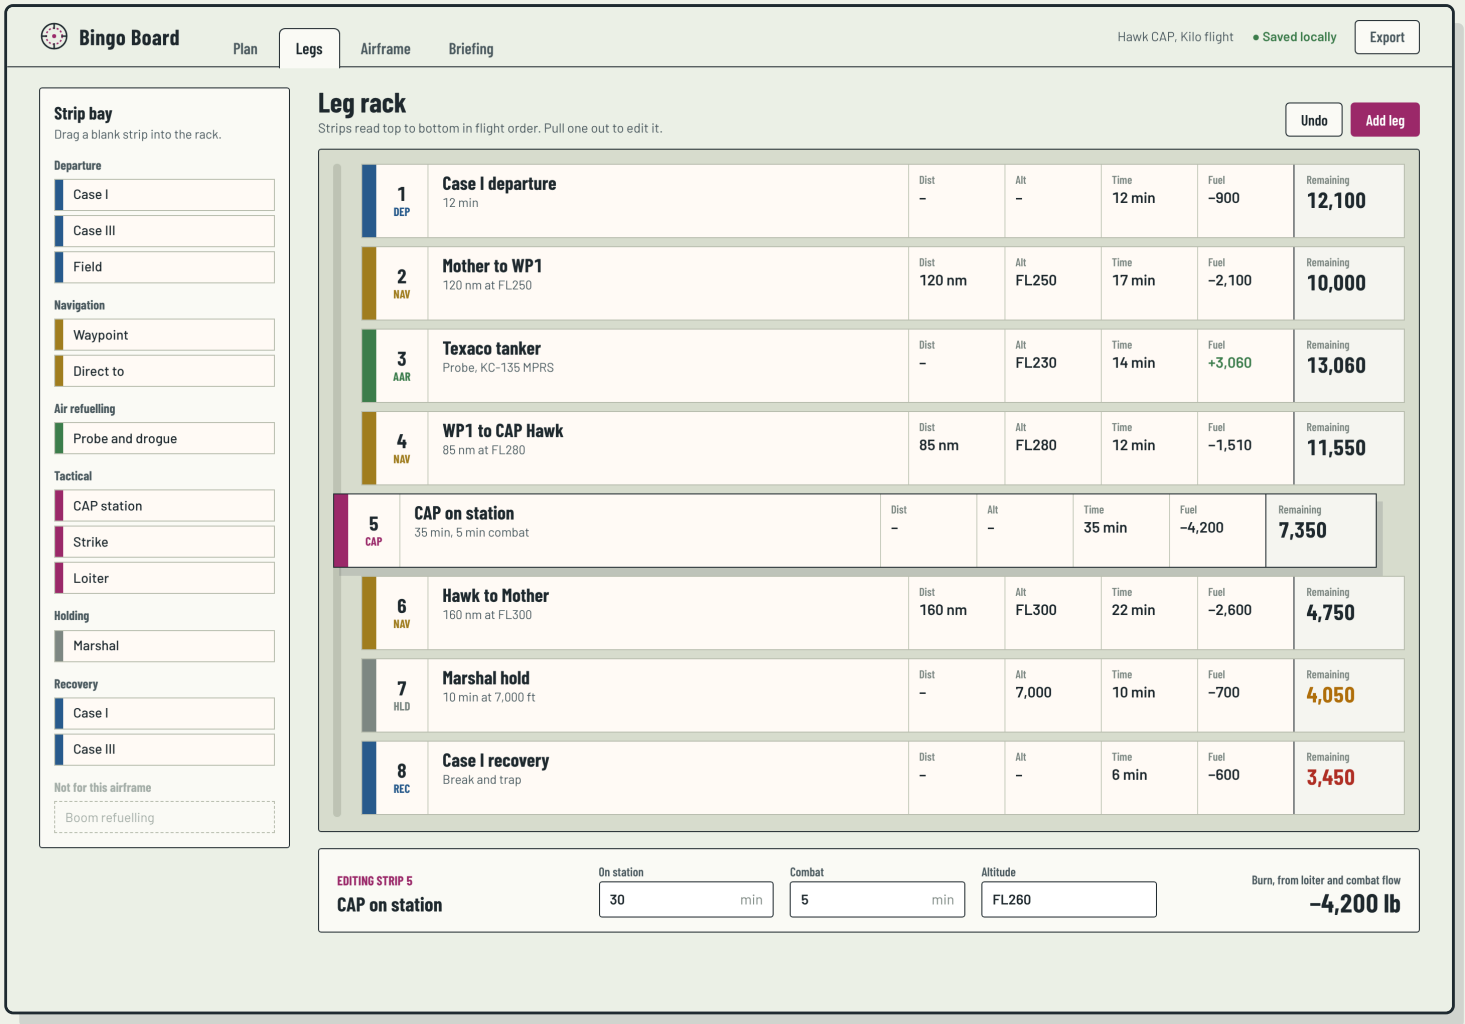

Screen 2 of 4

Leg rack

Each leg is a flight progress strip, colour-coded by type, in a rack you reorder by dragging. Pull a strip out to edit it in the panel below.

- Strip bay holds blank strips for each leg type the airframe can fly.
- Every strip shows distance, altitude, time, fuel and remaining in fixed boxes.
- Remaining turns amber and red in the strip itself, so the rack doubles as a fuel check.

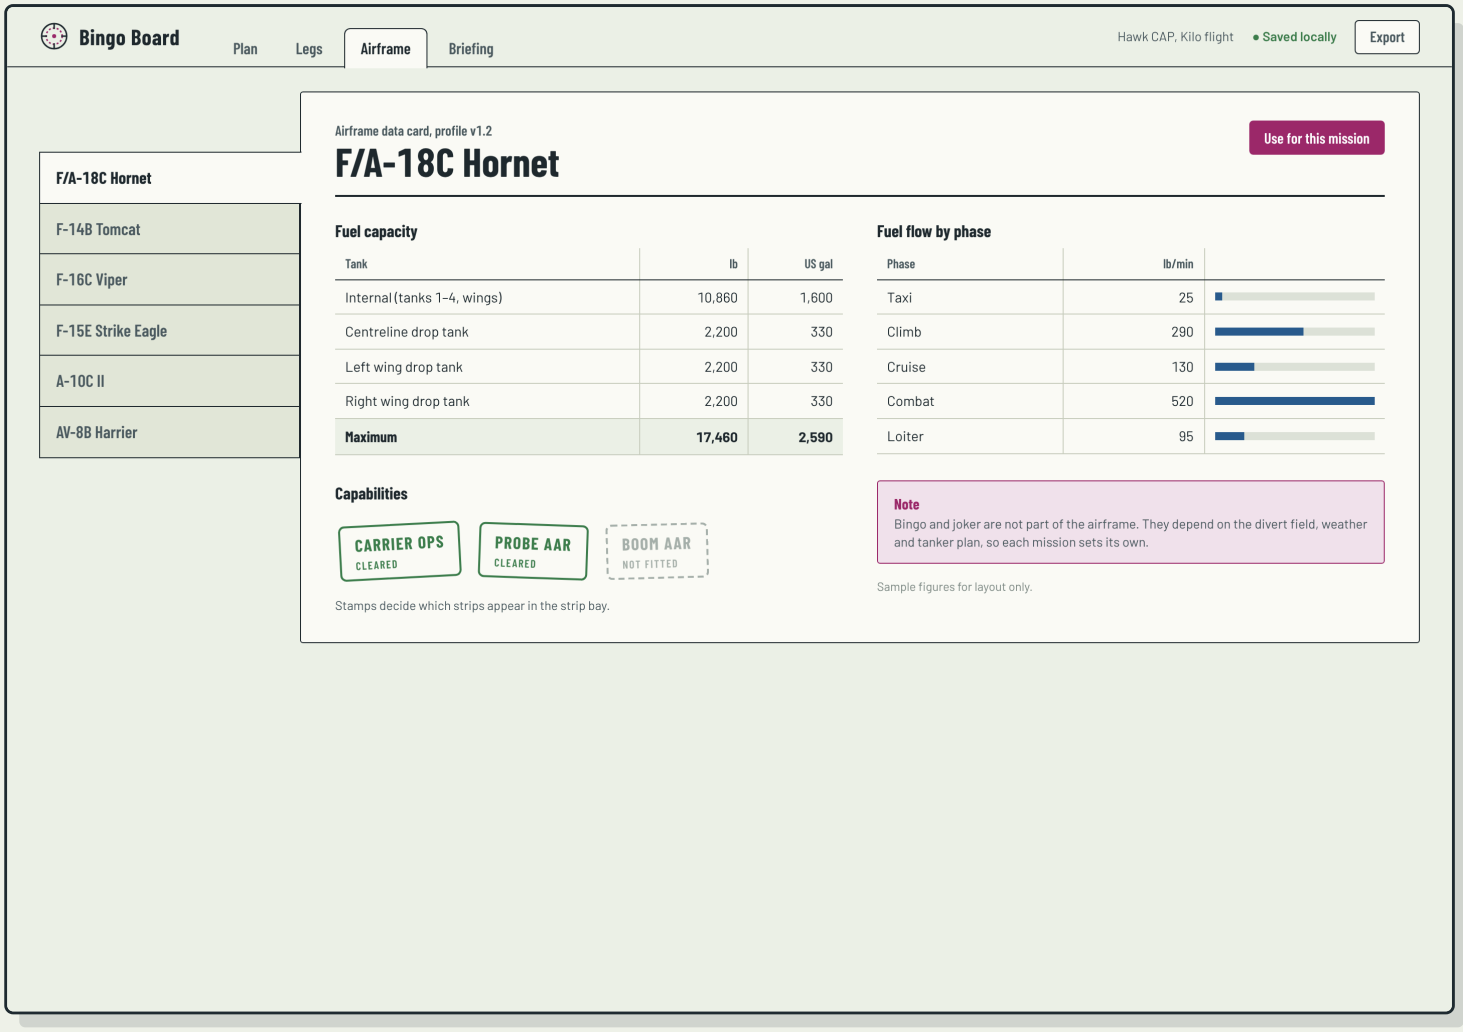

Screen 3 of 4

Airframe data card

Airframes sit in an index of tabs, each opening a printed-style data card with tank capacities and fuel flow tables.

- Capabilities shown as approval stamps, cleared or not fitted.
- Tables include US gallons alongside pounds for crossover with real data.
- Margin note restates that bingo and joker belong to each mission.

Screen 4 of 4

Briefing pack

A kneeboard nav log with a blank Actual column to fill in during the flight, plus print options, DCS PNG export, file sharing and revisions.

- Choose which sections go on the kneeboard.
- Revisions are labelled Rev A, B, C, like real planning documents.
- No account needed: share the file, open it anywhere.
